

Final Project Submission

Student Information

Name: Thirisha

Project Overview

This project demonstrates my understanding of modern web development using **HTML5, CSS3, and JavaScript**. The website was designed to be responsive, accessible, and visually appealing while following best practices for web design.

Website Features

- Responsive layout for desktop, tablet, and mobile devices.
- Accessible navigation with a **Skip to Main Content** link.
- Semantic HTML elements.
- Images with descriptive alternative (alt) text.
- Interactive JavaScript functionality.
- Modern styling using CSS Grid, Flexbox, and media queries.

Website Link

GitHub Repository:

<https://github.com/Thirisha7708/WEB-DESIGN>

W3C Validation

The HTML and CSS code was validated using the W3C Validator. Validation screenshots are included to demonstrate that the website complies with web standards.

Responsive Design

The website was tested on multiple screen sizes to ensure that the layout adjusts correctly for desktop, tablet, and mobile devices. Screenshots demonstrating the responsive behavior are included.

CSS Styling

The website includes:

- CSS Grid and Flexbox layouts.
- Responsive media queries.
- Consistent typography and color scheme.

- Hover and focus effects.
- Proper spacing and alignment.

Four Extra Features

1. Skip to Main Content link.
2. Keyboard-accessible navigation.
3. Responsive layout using media queries.
4. JavaScript interactivity for improved user experience.

Conclusion

This project demonstrates responsive web design, accessibility, semantic HTML, CSS styling, and JavaScript interactivity. It reflects the skills learned throughout the course and follows modern web development standards.
