

Portfolio Project Description

Student Information

Name: Thirisha

Project Overview

This project is a personal portfolio website developed using **HTML5, CSS3, and JavaScript**. I started with a website template and customized it to create a responsive, accessible, and visually appealing portfolio that showcases my skills and projects.

Changes Made to the Template

To personalize and improve the template, I made the following changes:

- Replaced the sample content with my own information.
- Updated the navigation menu and page headings.
- Added my own images and meaningful alternative (alt) text.
- Modified the color scheme, fonts, and layout using CSS.
- Improved accessibility by adding a **Skip to Main Content** link and ensuring keyboard navigation.
- Optimized the layout for desktop, tablet, and mobile devices using responsive design techniques.

Website Link

GitHub Repository:

<https://github.com/Thirisha7708/WEB-DESIGN>

(If your website is hosted on GitHub Pages, include that website URL here.)

W3C Validation

The HTML and CSS files were checked using the **W3C HTML Validator** and **W3C CSS Validator**. Validation screenshots are included to demonstrate compliance with web standards.

Responsive Design

The website was tested on desktop, tablet, and mobile screen sizes. Screenshots are included to demonstrate that the layout adjusts correctly across different devices.

CSS Styling

The website includes:

- CSS Grid and Flexbox layouts.
- Responsive media queries.
- Consistent typography and color palette.
- Hover and focus effects.
- Proper spacing, alignment, and styling.

Accessibility Improvements

To improve accessibility, I:

- Added a **Skip to Main Content** link.
- Used semantic HTML elements.
- Added descriptive alternative text for all images.
- Ensured keyboard accessibility.
- Maintained sufficient color contrast and visible focus indicators.

Four Extra Features

1. Skip to Main Content link.
2. Keyboard-accessible navigation.
3. Responsive design using media queries.
4. JavaScript interactivity for enhanced user experience.

Conclusion

This portfolio project demonstrates my understanding of responsive web design, accessibility, HTML, CSS, and JavaScript. By customizing a template and improving its accessibility and responsiveness, I created a professional portfolio website that follows modern web development standards.
