

Final Project Description

Student Information

Name: Thirisha

Project Overview

My project is a responsive and accessible website created using **HTML5, CSS3, and JavaScript**. The goal of the website is to provide a clean, easy-to-use interface while following modern web development and accessibility standards.

Project Features

- Responsive layout that works on desktop, tablet, and mobile devices.
- Accessible navigation with a **Skip to Main Content** link.
- Images with meaningful alternative (alt) text.
- Interactive features using JavaScript.
- Attractive styling using CSS, including Flexbox and Grid layouts.

Website Link

If hosted:

Website URL: ([https://github.com/Thirisha7708/WEB-DESIGN/blob/main/Video Presentation Description.txt](https://github.com/Thirisha7708/WEB-DESIGN/blob/main/Video%20Presentation%20Description.txt).)

W3C Validation

The HTML and CSS files were checked using the W3C Validator, and any validation errors were corrected. Screenshots of the validation results are included with the submission.

Responsive Design

The website was tested on different screen sizes to ensure that the layout adjusts correctly for desktop, tablet, and mobile devices. Screenshots demonstrating the responsive layout are included.

CSS Styling

The website uses:

- CSS Grid and Flexbox for layout.
- Consistent colors and typography.
- Proper spacing, margins, and padding.

- Hover and focus effects for navigation.
- Responsive media queries.

Four Extra Features

1. Skip to Main Content link for accessibility.
2. Keyboard-accessible navigation.
3. Responsive design using media queries.
4. JavaScript interactivity for user engagement.

Conclusion

This project demonstrates the use of semantic HTML, accessible web design, responsive layouts, CSS styling, and JavaScript to create a modern, user-friendly website.
