

Final Project Description

Student Information

Name: Thirisha

Project Overview

My project is a responsive and accessible website developed using **HTML5, CSS3, and JavaScript**. The website was designed to provide a clean, user-friendly experience while following modern web development and accessibility standards.

Project Features

- Responsive layout for desktop, tablet, and mobile devices.
- Accessible navigation with a **Skip to Main Content** link.
- Semantic HTML structure.
- Images with descriptive alternative (alt) text.
- Interactive JavaScript features.
- Modern CSS styling using Flexbox, Grid, and media queries.

Website Link

GitHub Repository:

<https://github.com/Thirisha7708/WEB-DESIGN>

(If you have published your project using GitHub Pages, include that website URL here instead.)

W3C Validation

The HTML and CSS code was validated using the **W3C Markup Validation Service** and **W3C CSS Validator**. Validation screenshots are included to demonstrate compliance with web standards.

Responsive Design

The website was tested on desktop, tablet, and mobile screen sizes. Screenshots are included to demonstrate that the layout adapts correctly across different devices.

CSS Styling

The website includes:

- CSS Grid and Flexbox layouts.

- Responsive media queries.
- Consistent typography and color scheme.
- Hover and focus effects.
- Proper spacing, margins, and alignment.

Four Extra Features

1. Skip to Main Content link.
2. Keyboard-accessible navigation.
3. Responsive layout using media queries.
4. JavaScript interactivity (keyboard events, image updates, or other interactive features).

Submission Checklist

The submission includes:

- A written description of the project.
- A link to the GitHub repository (or hosted website).
- W3C HTML and CSS validation screenshots.
- Screenshots demonstrating responsive design.
- CSS styling examples.
- Evidence of the four additional features.

Conclusion

This project demonstrates responsive web design, accessibility, semantic HTML, CSS styling, and JavaScript interactivity. It reflects the knowledge and skills gained throughout the course and follows current web development best practices.
