

Final Project Submission

Student Information

Name: Thirisha

Project Description

My project is a responsive and accessible website created using **HTML5, CSS3, and JavaScript**. The website demonstrates the concepts learned throughout the course, including semantic HTML, responsive layouts, accessibility, and interactive JavaScript features.

Website Link

GitHub Repository:

<https://github.com/Thirisha7708/WEB-DESIGN>

(If you have published the project using GitHub Pages, include your live website URL here.)

W3C Validation

The HTML and CSS files were validated using the **W3C Markup Validation Service** and the **W3C CSS Validator**. Screenshots of the validation results are included with this submission to demonstrate compliance with web standards.

Responsive Design

The website was tested on desktop, tablet, and mobile devices. Screenshots are included to show that the layout adjusts correctly to different screen sizes and remains easy to use.

CSS Styling

The website includes:

- Responsive layouts using CSS Grid and Flexbox.
- Consistent typography and color scheme.
- Proper spacing, margins, and alignment.
- Hover and focus effects for improved usability.
- Media queries for different screen sizes.

Four Extra Features

1. Skip to Main Content link for accessibility.

2. Keyboard-accessible navigation.
3. Responsive layout using CSS media queries.
4. JavaScript interactivity for an enhanced user experience.

Evidence Included

This submission includes:

- A written description of the project.
- A link to the GitHub repository (or hosted website).
- Screenshots of the W3C HTML and CSS validation results.
- Screenshots demonstrating responsive design.
- CSS styling examples.
- Evidence of the four additional features.

Conclusion

This project demonstrates my understanding of responsive web design, accessibility, semantic HTML, CSS styling, and JavaScript. It reflects the skills developed during the course and follows modern web development best practices.
